

Clean, wash and protect concrete trucks with Mule Head Brand's ready-mix concrete truck cleaning package

Clean and protect your concrete trucks with Mule Head Brand's proprietary acid-based ready-mix concrete truck cleaning system package. Our cleaning, washing-neutralizer, and wax-protectant solutions are all highly concentrated so you get great cleaning and protection at maximum value.

Does this mean your employees have to dilute and mix our solutions before use? No they don't.

Our system solutions are applied with our Mule Head Brand 3-way foamer-proportioner. This foamer-proportioner is pre-set at the factory for optimum cement truck cleaning and protection. Your employees don't have to dilute or mix these solutions.

Your choice of two foaming acid cleaners

Choose from two pink foaming acid cleaners, PA Pink Foaming Acid Concrete Truck Cleaner and HC Pink Foaming Acid Concrete Truck Cleaner. The HC product is the most aggressive cleaner. Both cleaners are compounded with corrosion inhibitors to protect bare metal surfaces.

Mega Sudz Foaming Vehicle Washing Compound

Part two of the system is time-proven, Mule Head Brand Mega Sudz Foaming Vehicle Washing Compound, a highly effective industrial-strength detergent and neutralizer. Mega Sudz is formulated to work hand-in-hand with both Mule Head Brand foaming acid cleaners.

Aqua Bead Rinse Wax/Protectant

The final touch of the Mule Head Brand system is Mule Head Brand Aqua Bead Rinse Wax/Protectant. This product shines and protects trucks with a wax coating. This protective barrier helps protect your trucks from new concrete spatter sticking to the surface and makes the next cleanup job easier.

Mule Head Brand 3-way foamer/proportioner

Mule Head Brand's 3-way foamer-proportioner is the perfect tool to apply the system. Applied with this foamer-proportioner, either acid cleaner produces a rich, thick foam, the most effective way to remove concrete spatter.

Once the acid foam has done its work, the operator flips a switch to apply Mega Sudz washing-neutralizer solution. Flip the switch once more to apply Aqua Bead Rinse Wax/Protectant, and the job is done.
